/Amr Awad/ Supervisory Patent Examiner, Art Unit 2629			

Continuation of 3. NOTE: Previously dependent claim 7 was amended into claim 1, while dependent claim 15 was amended into claim 9. Thus, claims 2-6, 8, 19 and 21-22 which depended from claim 1 and claims 10-14, 16, 20 and 23-24 which depended from claim 9 have been changed in scope since these claims previously did not require the limitations of claims 7 and 15 respectively. Thus the amendment would require further consideration. Further claims 3 and 27 were also amended.

Continuation of 11. does NOT place the application in condition for allowance because: The applicant argues the rejection of previous claim 7 (Amended claim 1) on page 11 of the response. The applicant first argues that AAPA and Fukushima cannot be combined and that the Office Action does not provide sufficient motivation. The examiner respectfully disagreees. Both AAPA and Fukushima disclose driving methods for a plasma display and one of ordinary skill in the art at the time the invention was made would have realized that one method can be substituted with the other. Not finding motivation DOES NOT imply non-obviousness (See KSR). The applicant further argues that Akiba cannot be combined with AAPA and Fukushima, and also that Akiba does not disclose the asserted features in the Office Action. The examiner disagrees. On page 13, lines 3-7 the applicant states that changing AAPA's pulse DATA would effectively eliminate any address pulse, absent other changes. Well based on the combination of references other changes are made besides just the address pulse, thus there is an expectation of success. Further the applicant states that Akiba does not teach a ground voltage to select on-cells, however, paragraph [0067] states that instead of selecting on cells that off cells could be selected. This means that if off cells are selected that on cells are not, which means that a ground voltage or a zero voltage is used. See Figure 1 of Akiba. The applicant then argues claim 9 for the same reasons as claim 1, and for the same reasons the examiner believes the combination is proper. With respect to claim 25, the applicant argues similarly to claim 1 regarding the combination of references. The applicant specifically states on page 15 that the combined references do not suggest applying data of a first voltage to the address electrode during the reset period. The examiner, however, explained in the rejection that AAPA shows a ground or zero voltage applied to the address electrode during the reset period, and with the combined refereces, the first voltage is zero or ground, which means that the first voltage is applied during the reset period. The applicant is reminded that the rejection was based upon a combination of references. .
